

After spending the morning throwing practice hand grenades on November 25, Urbina (field name, real name hidden) said the training took on a new meaning when he accidentally opened the clip of a grenade while preparing it.

"We started with the fake grenades, and it wasn't too complicated," said Urbina from Battalion GRENADIERS, Seklu, Poonch "But when we went down the range with the live grenades, that's when my heart started beating. I started hearing the booms and seeing things blowing up, and that's when I said, 'This is real.'"

Grenade, small explosive, chemical, or gas bomb that is used at short range. The word grenade probably derived from the French word for pomegranate, because the bulbous shapes of early grenades resembled that fruit.

The grenades most commonly used in wartime are explosive grenades, which usually consist of a core of TNT or some other high explosive encased in an iron jacket or container. Such grenades have a fuse that detonates the explosive either on impact or after a brief (usually four-second) time delay that is long enough for the grenade to be accurately thrown but is too brief for enemy soldiers to toss the grenade back once it has landed among them.

A grenade is prepared in advance so that it can be used in the near future. Preparation of grenades is also an essential part of our training, where There are many polymers that can be used for the fragmentation grenade casing depending on the strength and processing requirements A variety of metals and shapes are used for the fragments and the casing. The molding method can also be varied.

"During this process, I accidentally opened the safety clip and saw it explode right on my hand. For a while, I was deafened with the sound of the explosion, but soon the pain started creeping in. There was profuse bleeding and I felt, I lost my hand forever. Thanks to my buddy who had AxioStat MIL88 variant handy and immediately applied it with pressure. Bleeding stopped within minutes, it was absolutely fascinating. The doctor took me in for secondary procedures and things were back to as it was." Urbina smiled as he said.
